

Resume - Vinay Keerthi

Backend & Data Engineer with 12+ years of experience building Python services, data platforms, automation systems, and high-performance Rust components. Specialized in FastAPI/Django backends, data pipelines, CLI tooling, and AI-enabled product workflows.

Key Skills

- Python: FastAPI, Django, Pydantic, PySpark, Airflow, Dagster, Celery, Poetry
- Languages: Python, Rust, JavaScript
- Backend: FastAPI, Django, PostgreSQL, Redis, REST APIs, async services
- Data Engineering: Kafka, Spark (PySpark), Airflow, Dagster, Redis
- Rust: Tokio (async runtime), Rocket (web framework), Clap (CLI), PyO3 (Python bindings), Serde, internal crates
- Cloud: AWS (S3, EC2, IAM), GCP (BigQuery, Cloud Functions)
- DevOps: Linux (daily driver since 2005), Docker, Kubernetes, CI/CD, Prometheus, Grafana
- AI Engineering: Langfuse, LLM observability, transcript analysis, RAG, Claude, Codex, OpenCode

Featured Product

- [Merrilin.ai](#) - Built Merrillin since **February 2026**, an AI-powered ebook reader that helps readers ask questions within one or more books while avoiding spoilers. Built AI reading workflows with book-aware retrieval, spoiler-safe question answering, and Langfuse-backed observability. Backend: **FastAPI**, **Celery**, and **PostgreSQL**.

Experience

1990Labs | Lead Engineering Consultant | **Bangalore; Remote** | **Feb 2026 - Ongoing**

- Built **Canvass** from the ground up, a managed market research marketplace connecting companies with paid research participants, using **Python** and **FastAPI** for the backend.
- Designed backend APIs and research operations workflows covering study intake, participant management, AI moderation, transcript processing, and report building.
- Built AI-led phone, chat, and transcript-analysis workflows, including AI-moderated voice calls that steer research conversations through a pool of questions and turn raw responses into structured insight reports.

Chatwoot

Lead Engineer | **Bangalore; Remote** | **September 2025 - January 2026**

- Cut down response times by 40% through **PostgreSQL** query optimization - analyzed query plans, identified unused indices, and tuned database configuration.

BE Mechanical Engineering (2010)

Autogenerated from an rst file on 2026-05-12 using Python.

- Improved **Captain**, Chatwoot's customer-facing AI agent, and contributed **Langfuse** / Sentry observability improvements for AI workflows.

ChainSafe

Software Developer | Bangalore | November 2022 - February 2025

- Built **Python** and **Dagster** data analytics pipelines for multiple blockchains, feeding curated datasets into **Apache Superset** dashboards for EVM wallet health monitoring, cross-chain alerting, and balance tracking.
- Built **Rust** services, internal crates, and CLI tooling for blockchain validators, libp2p networking, event monitoring, and wallet operations.
- Built LLM assistants using **Ollama** and **ChromaDB** for smart contract analysis and project documentation.

Merkle Science

Software Developer | Bangalore | July 2021 - November 2022

- Designed and maintained **Rust libraries** for high-throughput blockchain ingestion using **Tokio** for async processing and **Serde** for data serialization.
- Built **Python bindings via PyO3** to expose Rust performance to Python data pipelines, achieving 10x throughput improvements.
- Prototyped a **Kafka + PySpark pipeline** to process high-velocity blockchain transactions for compliance use cases.
- Maintained the **Django** backend for customer-facing dashboards and compliance rule engines.

VISA Inc.

Sr. Software Engineer - Data Platform | Bangalore | May 2019 - June 2021

- Led development of **Python** internal tools for secure server orchestration, onboarding automation, and PCI-compliant infrastructure workflows.
- Built a Python CLI-driven deployment framework for the Platform-as-a-Service (PaaS) team, tailored to Visa's internal systems — combining aspects of Ansible with custom workflows.
- Mentored junior engineers and interns; led Python workshops and cross-team code review sessions to standardize engineering practices.

GKN Aerospace India

Software Engineer | Bangalore | December 2015 - May 2019

- Built internal search tools, GPU-accelerated **Python** libraries, and managed CI/CD pipelines.

Flipkart Internet Pvt. Ltd.

Bangalore | February 2014 - December 2015

- Developed automation tools in Python for content workflows and marketing campaigns.
